

Statement of participation

Jubayer Al mamun

has passed the free course including all mandatory tests for:

Leadership and followership

This free 24-hour course explored leadership and followership in the workplace.

Issue date: 19 August 2026

www.open.edu/openlearn

This statement does not imply the award of credit points nor the conferment of a University Qualification.
This statement confirms that this free course and all mandatory tests were passed by the learner.

Please go to the course on OpenLearn for full details:

COURSE CODE: LF_2

Leadership and followership

<https://www.open.edu/openlearn/education-development/learning/leadership-and-followership/content-section-overview>

Course summary

This free course, Leadership and followership, will help you to explore what makes a good leader, recognise common leadership challenges, and identify the skills you need to develop if you want to enhance your own leadership experience.

Learning outcomes

By completing this course, the learner should be able to:

- describe a variety of leadership styles and approaches and analyse how they fit with personal preferences
- recognise the skills required for leadership and assess personal experience and capability
- define followership, from the perspectives of both the leader and the follower
- identify how effective leadership can overcome a variety of common challenges
- reflect on personal experience, start a leadership journal and devise an appropriate plan of action to develop leadership skills.

Completed study

The learner has completed the following:

Week 1

Where are you starting from?

Week 2

What kind of leader could you be?

Week 3

What makes a good leader?

Week 4

When leadership goes wrong

Compulsory badge quiz (score 93%)

Week 5

Why is followership important?

Week 6

Challenges for every leader

Week 7

The future of leadership

Week 8

Developing yourself as a leader

Compulsory badge quiz (score 94%)

Statement of participation

Jubayer Al mamun

has completed the free course including any mandatory tests for:

Manufacturing

This 20-hour free course acted as a sequel to 'Design'. It showed how designs become products through the right choice of materials and processes.

Issue date: 19 August 2026

www.open.edu/openlearn

This statement does not imply the award of credit points nor the conferment of a University Qualification.
This statement confirms that this free course and all mandatory tests were passed by the learner.

Please go to the course on OpenLearn for full details:

COURSE CODE: T173_2

Manufacturing

<https://www.open.edu/openlearn/science-maths-technology/design-innovation/manufacturing/content-section-0>

Course summary

How are designs turned into products? What resources, materials and methods are used and what set of activities goes under the heading of 'manufacturing'? This free course will introduce manufacturing as a system and will describe some of the many different ways of making products. We will illustrate how the required properties of the materials in a product influence the choice of manufacturing process used.

Learning outcomes

By completing this course, the learner should be able to:

- explain the difference between industrial and engineering design with reference to familiar products; and for specific products explain whether it is the product's form or its function that enhances its value in the marketplace
- understand the concept of a product design specification (PDS), and be able to indicate some of the factors which should be included in producing one
- describe the role of marketing in developing the PDS for a product
- classify products simply in terms of their basic shape
- describe the difference between the hot and cold working of metals and give the advantages of each.

Completed study

The learner has completed the following:

Section 1

Introduction

Section 2

Casting

Section 3

Forming

Section 4

Cutting

Section 5

Joining

Section 6

Making the gearwheel

Section 7

Surface engineering
